

## Disabling Power Saving.

If you have just downloaded or are going to download and install the software. We recommend you disable Power Saving mode, while your PC or Laptop is plugged into the main power supply.

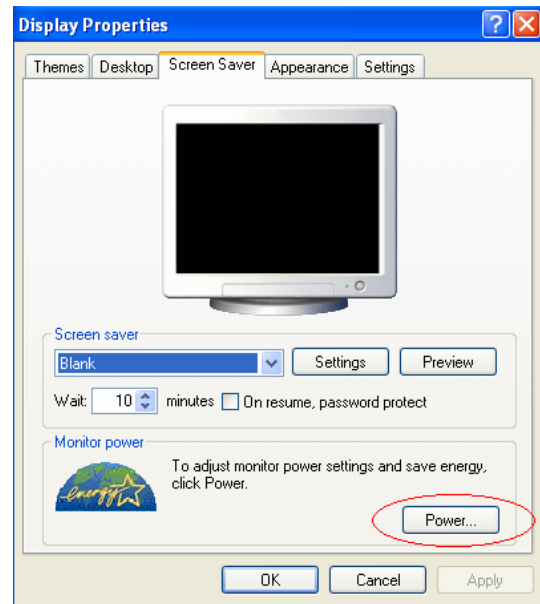

This also ensures your Hotspot is always live, and user are getting access properly which means you get paid!!!

This will be included in later Zonerider Gateway versions, but for now please follow these simple instructions.

1. Right click anywhere on your desktop. And click on **“Properties”**

2. Click on **“Screen Saver”** tab, then click on the **“Power”** button

3. Set the **“Plugged in”** settings to **“never”** on all the menus. Once complete click OK or Apply to save this setting
